- Reporting
- Documentation control
- Time consuming data gathering
- Too much data in various files that are untraceable
- Standardization and automation of work processes
- Coordination between departments, information sharing
- Identification of main issues, focusing
- Supplier quality

Solution

QUAMA is a tool that helps companies manage all quality processes. Before the company even comes to decision of obtaining ISO certificate, it should work on internal processes.

With QUAMA company can take charge about joint environment for all the documents, corrective actions, risk analysis etc. and for it to be made continuously.

From this point of view, this is not only a solution for the problem, but also added value for the company because it gives them a chance at sustainability and better management and business improvement.

What do our clients say?

“With the help of QUAMA we have completely replaced paper usage in the areas of quality, have evaded the forging of data, with that we have ensured the management for better decision making, have optimized our internal processes and generally got a better overview of our work.”

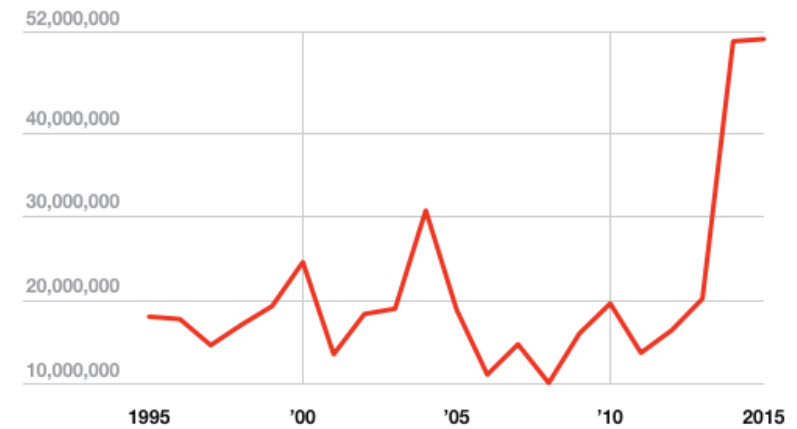

Market validation

“Automakers recalled a record 51.26 million vehicles last year in the U.S. over defects, continuing a two-decade trend of vigilance from manufacturers and regulators.”

<http://fortune.com/2016/01/22/nhtsa-auto-recalls/>

Vehicle recalls in the U.S.

Last year saw a record 51.26 million vehicle recalls, beating the previous mark set the year before.

Advantages of QUAMA

Unique environment for the entire field of quality

Connectivity with any ERP system

Transparency of data

Team work

We can avoid sending files through emails and saving to disks, where we never know if they are real

We are not tied to certain location (localization, multi-language)

Preparation for obtaining certificate is much more efficient
